CREDIT CARD FINANCIAL AND CUSTOMER REPORT

2023 Financial & Customer Performance Review

10,108 Cardholders | 4 Card Tiers | 28 States | Jan–Dec 2023

Executive Summary

This report analyzes 10,108 credit card accounts across full-year 2023, combining transaction performance with customer demographics to identify where revenue concentrates, which segments drive the most value, and where early risk signals are emerging.

$55.32M Total Revenue	**$575.9M** Total Income	**$44.52M** Transaction Value	**$7.84M** Interest Earned

3.19 / 5 Satisfaction Score	**27.5%** Avg. Utilization	**6.07%** Delinquency Rate	**57.5%** 30-Day Activation

Key Findings

- **Premium tiers monetize far better per client.** Blue is 91% of cardholders but only 83% of revenue — Platinum holders generate 3.4x more revenue per client ($16,949 vs. $5,008), and carry far lower utilization risk (15.1% vs. 29.2%).
- **Two segments anchor the book.** Businessmen ($17.4M) and White-collar customers ($10.1M) generate half of all revenue from just 38% of customers; the 40-60 age band alone drives over 75% of revenue.
- **Revenue and channel mix are both concentrated.** 94% of revenue comes from just 5 states (TX, NY, CA, FL, NJ); Online transactions are only 6% of revenue versus 63% for Swipe, leaving clear digital growth headroom.
- **Risk concentrates in specific segments.** Delinquency is highest among Doctorate and Unknown-education holders (7.3%, 7.1%) vs. High School (5.4%) — pointing to where underwriting attention is most needed.

Card Tier Performance

Revenue and risk diverge sharply once normalized per cardholder across the four card tiers.

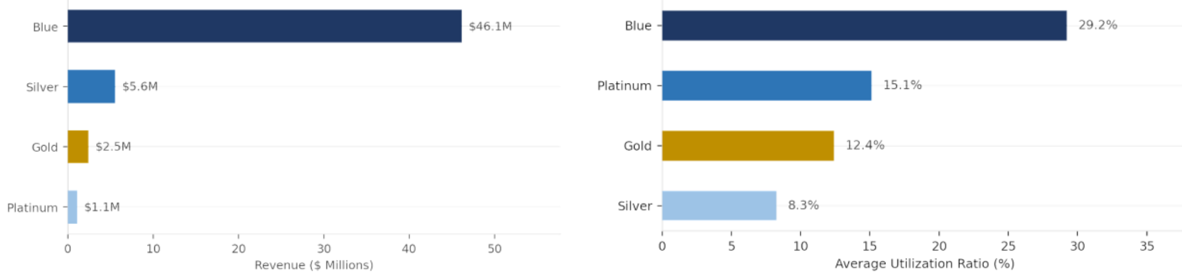

Figure 1. Revenue by card tier ($M, left) and average utilization ratio (right)

Card Tier	Clients	Revenue	Rev / Client	Avg. Util.
Blue	9,214	$46,139,398	$5,008	29.2%
Silver	639	$5,586,332	$8,742	8.3%
Gold	188	$2,454,072	$13,054	12.4%
Platinum	67	$1,135,608	$16,949	15.1%
Total	**10,108**	**$55,315,410**	**$5,472**	**27.5%**

Blue cardholders carry more than 3x the utilization of Silver, marking the entry tier as the portfolio's main exposure point, while Platinum's small base (67 clients, 0.7%) punches well above its weight on a per-client basis.

Quarterly & Weekly Trends

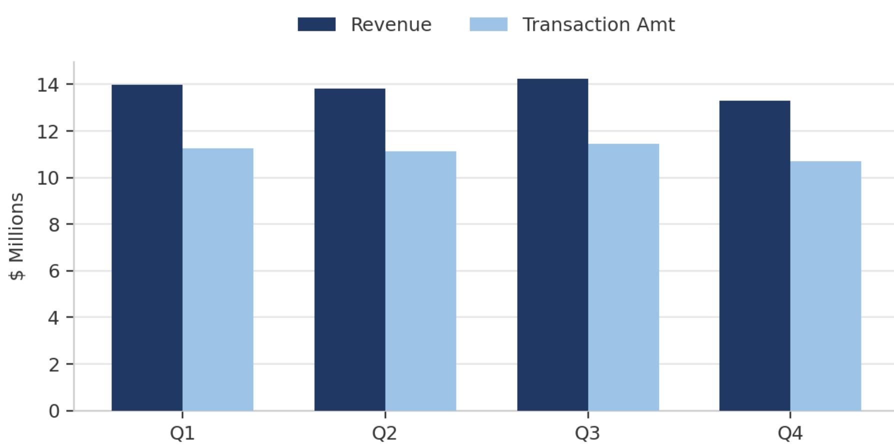

Figure 2. Revenue vs. transaction value by quarter ($M)

Revenue was stable across quarters (Q3 strongest at $14.24M, Q4 softest at $13.30M), with transaction value tracking closely — a sign of a mature, non-seasonal portfolio. Male cardholders contributed $30.22M (54.6%) vs. $25.09M (45.4%) for female cardholders across the year.

Customer Demographics & Revenue Drivers

Occupation, age, and education each show clear, distinct relationships with revenue.

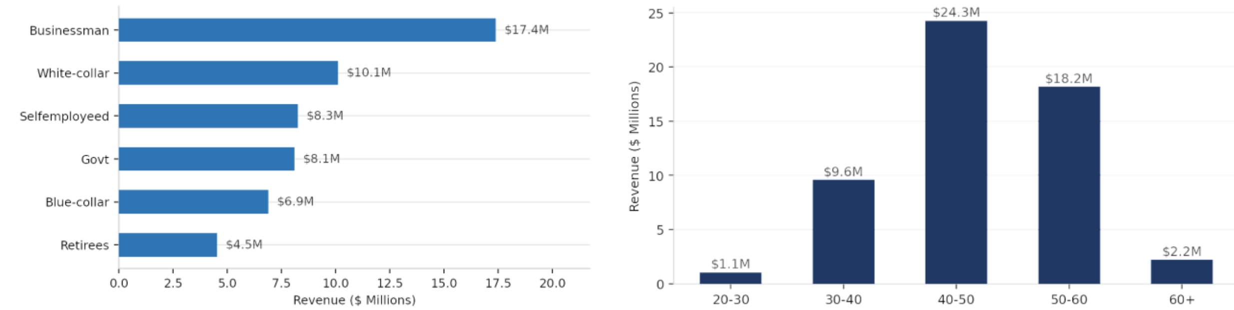

Figure 3. Revenue by occupation ($M, left) and by age group ($M, right)

Businessmen are the top revenue segment ($17.4M, 31%), 70% ahead of White-collar ($10.1M). Self-employed customers generate the most revenue per dollar of income (11.0¢), even ahead of Businessmen (9.3¢). By age, the 40-50 band alone drives 44% of revenue ($24.3M), with 40-60 combined contributing over three-quarters of the total — the core mid-career relationship is where the portfolio's value truly sits.

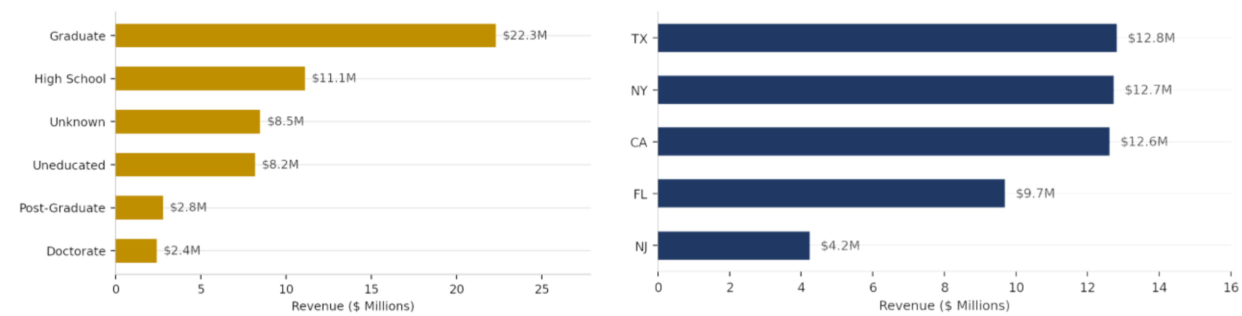

Figure 4. Revenue by education level ($M, left) and top 5 states ($M, right)

Graduate-level customers lead education segments at $22.3M (40%), double High School ($11.1M); Post-Graduate and Doctorate holders contribute the least in aggregate but carry the highest delinquency (6.2%, 7.3%). Geographically, just 5 states — TX, NY, CA, FL, NJ — generate 94% of all revenue, with the remaining 23 states combined contributing under 6%.

Spend Category & Channel Mix

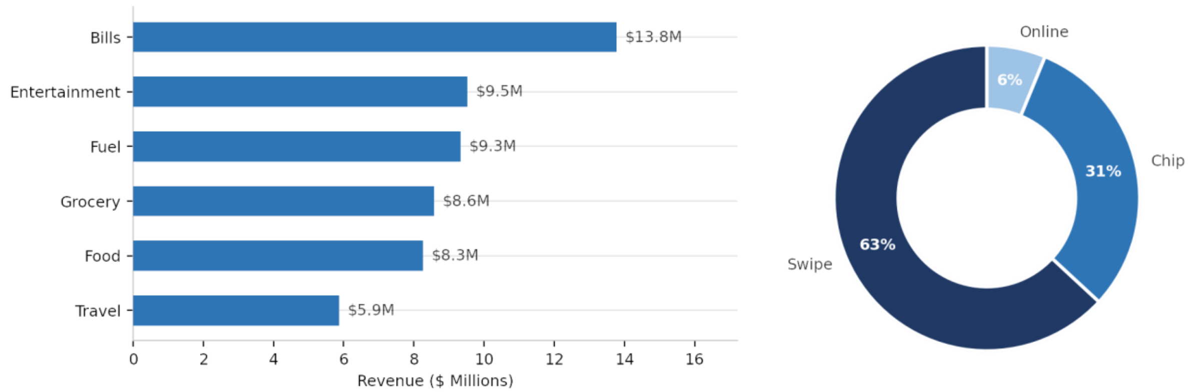

Figure 5. Revenue by expense category ($M, left) and by transaction channel (right)

Bills is the largest spend category ($13.8M, 25%) — a sticky, recurring usage pattern that supports stable revenue — ahead of Entertainment and Fuel (~17% each). By channel, Swipe still drives 63% of revenue versus just 6% for Online, highlighting a clear digital-adoption opportunity as consumer spending continues shifting toward e-commerce and digital wallets industry-wide.

Conclusions & Recommendations

The portfolio is financially healthy and stable: revenue holds steady quarter over quarter, satisfaction scores are consistent, and delinquency (6.1%) is contained. The clearest opportunities lie in better balancing where the business concentrates risk versus return.

- **Grow the premium tier base.** Premium tiers generate 2.6–3.4x more revenue per client than Blue but are under 3% of the portfolio — a targeted Blue-to-Silver/Gold upgrade campaign could lift revenue per client without growing headcount.
- **Tighten utilization monitoring on Blue.** Blue cardholders carry 3x the utilization of Silver — proactive credit-limit reviews and early-warning monitoring on high-utilization Blue accounts would help contain delinquency before it surfaces.
- **Invest in online channel adoption.** Online is just 6% of revenue. Digital wallet incentives and app-based promotions could capture incremental share as spending continues moving online.
- **Watch geographic concentration risk.** With 94% of revenue from 5 states, evaluate whether resourcing matches revenue share, and whether selective expansion elsewhere could diversify geographic risk.
- **Prioritize retention for core mid-career customers.** The 40-60 age band drives over three-quarters of revenue — retention and loyalty programs should prioritize this group over broad young-customer acquisition.
- **Review underwriting in higher-risk education segments.** Doctorate and Unknown-education segments show the highest delinquency despite low revenue contribution — underwriting criteria for these segments warrant review.

Methodology: *Revenue = Annual Fees + Total Transaction Amount + Interest Earned per account, consistent with the source SQL/Power BI dashboards (10,108 unique cardholders, full-year 2023). All figures reconcile exactly to the original dashboard totals.*
